

Pollinator Pathway Workshop

When: Thursday, May 31st, 6pm-9pm. Where: Indian River Lakes Conservancy Educational Building located at: 44010 Stine Rd. Redwood, NY 13679
Pre-registration Required (Details Below)

A Pollinator Pathway is a series of gardens containing native pollinator friendly plant species that form a distinctive vegetative path within an urban landscape. They provide habitat for pollinators, while also reducing the susceptibility of the urban landscape to the introduction of invasive species (*any non-native species that causes harm to the economy, environment and or human health*).

You can become part of this project right in your own backyard! Join us and learn about:

- Urban conservation and invasive Species
- Benefits of native plants and pollinators
- Suggested pollinator friendly species and how to utilize them in your yard
- Using YardMap a citizen science project hosted by the Cornell Lab of Ornithology

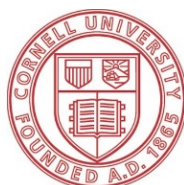

Indian River Lakes Conservancy, Cornell Cooperative Extension of Jefferson County and the St. Lawrence Eastern Lake Ontario Partnership for Regional Invasive Species Management (SLELO PRISM)

To Register, and for more information contact the Pollinator Pathway Project Coordinators:

Megan Pistolese- megan.pistolese@tnc.org or 315-387-3600 X 7724

Sue Gwise- sgj42@cornell.edu or 315-788-8450
